

tracing deleting

1) deleting a leaf node:-

delete 250

50 < 200 move left

root = 200 → null

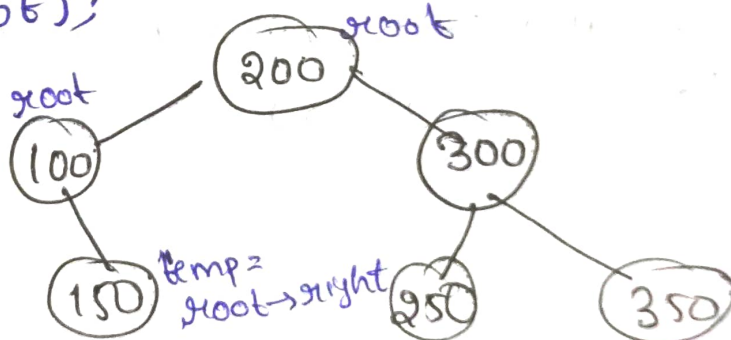

root → left

~~100~~ 50 < 100 move left

50 = 50

root → left = null & root → right = null

free(root);

2) deleting a node with one child:-

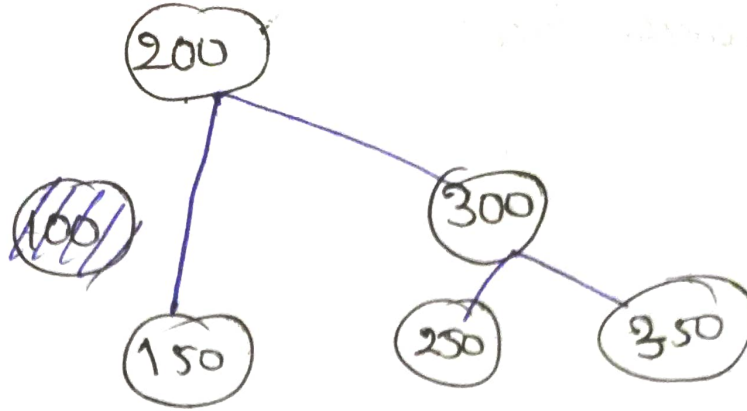

delete(100); ~~value~~

if (Value < root → data)

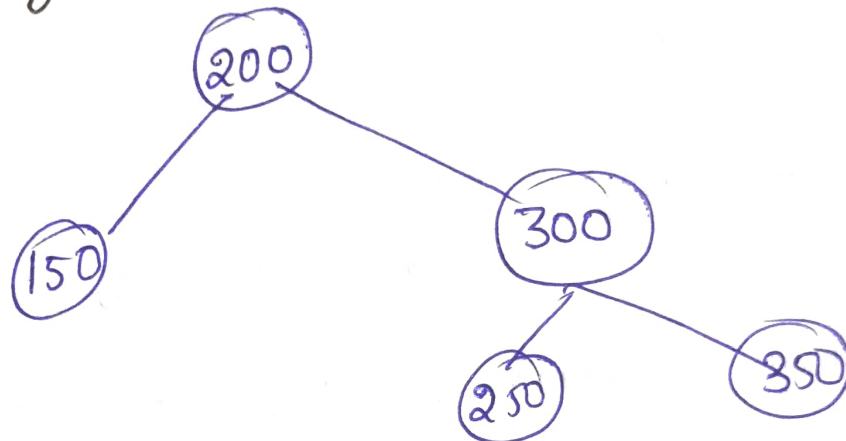

root → left = delNode (root, value)

temp = root → right temp = 150

free(root);

3) deleting a node with two child :-

$\text{root} = 200$ $\text{value} = 300$
 if $(\text{value} > \text{root} \rightarrow \text{data})$
 $\text{root} \rightarrow \text{right}$

$$\underline{300 = 300}$$

find largest in right subtree of the root.

$$350 > 300$$

~~root~~

$$300 = 350$$

$(\text{root} = \text{root} \rightarrow \text{left} \rightarrow \text{data})$

~~free(temp)~~ free(root)

~~300~~
